SUMMARY

Full-Stack Software Engineer with 4+ years of experience building and shipping production web and mobile applications across the JavaScript/TypeScript ecosystem (React, Next.js, Vue.js, Node.js, Nest.js Express) as well as Python/Django. Experienced across the complete engineering lifecycle: designing REST APIs, modeling relational and NoSQL databases (MySQL, PostgreSQL, MongoDB), containerizing applications with Docker, configuring Nginx reverse proxies, administering Linux/Ubuntu servers, and deploying to AWS cloud infrastructure. Built and maintain multi-tenant SaaS platforms serving multiple schools from a single codebase, alongside embedded/IoT device dashboards. Comfortable owning CI/CD pipelines with GitHub Actions and troubleshooting issues spanning frontend, backend, containers, networking, and servers.

TECHNICAL SKILLS

Frontend: React.js, Next.js, Vue.js, TypeScript, JavaScript, Tailwind CSS, Redux Toolkit, Pinia

Backend: Node.js, Nest.js, Express.js, Python, Django, RESTful API design, Socket.io, JWT auth, NextAuth.js

Databases: MySQL, PostgreSQL, MongoDB, Redis, Prisma, Firebase Firestore

Cloud & DevOps: AWS (EC2, S3, IAM, RDS, CloudWatch), Docker & Docker Compose, Nginx, Linux/Ubuntu server administration, GitHub Actions (CI/CD), PM2

Mobile: React Native, Expo, Firebase Auth/Firestore/Cloud Messaging

Embedded / IoT: Frontend integration with embedded-device data feeds, real-time device dashboards

Tools & Practices: Git/GitHub, GitHub-to-server deployment workflows, Vercel, remote cross-functional collaboration

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer | DevOps **Sep 2025 – Present**

TD4PAI Hardtech Hub — Remote & On-Site | Project: DAQBIN Embedded Devices Dashboard (enugu.daqbin.ng, lagos.daqbin.ng)

- Built full-stack dashboards visualizing real-time embedded/IoT device data, working across **frontend, backend, and database layers** to serve live system status to end users.
- Set up and administered **Linux (Ubuntu) production servers**, preparing infrastructure and hardening environments for live deployment.
- Containerized full-stack applications with **Docker and Docker Compose**, configuring container networking for multi-service deployments.
- Configured **Nginx as a reverse proxy** in front of Node.js applications to manage production traffic routing.

- Connected production servers directly to **GitHub repositories**, cloning and deploying projects straight into Docker containers as part of the release workflow.
- Built **CI/CD pipelines with GitHub Actions** to automate build and deployment steps.
- Deployed and managed application infrastructure on **AWS**, alongside MySQL, MongoDB, PostgreSQL, and Redis database services.
- Diagnosed and resolved issues spanning **frontend, backend, Docker, networking, and server configuration** in a live production environment.
- Partnered with embedded engineers to align frontend data visualizations with firmware output, integrating device data into responsive dashboards.

Full Stack Developer (Contract) — Apr 2024 – October 2026

AS Code Elevate Solution Limited — Remote | Projects: cbt.ascodeelevate.com, acct.ascodeelevate.com, result-manager.ascodeelevate.com

- Built a **multi-tenant school management SaaS suite** used by multiple schools from a single codebase — not a one-off single-school build — covering result processing, attendance, and an **accounting/fees management module**, using **Node.js/Express REST APIs** with **Socket.io** for real-time features.
- Built the mobile client with React Native and Redux Toolkit for optimized state management across the app. • Integrated payment gateways including Paystack, Flutterwave, and Squad (GTBank) for payment and transaction workflows.
- Designed and optimized multi-tenant database schemas to improve query performance and data integrity across schools.
- Coordinated deployment of new features to **Vercel** with a fully remote cross-functional team.

Mobile App Full Stack Developer (Contract) — Feb 2025 – Jun 2025

Splantom Technology — Remote | App: petrolapp on Google Play

- Developed and maintained **petrolapp**, a production React Native mobile application, integrating **Firebase Functions, Node.js, and Express.js** backend services.
- Implemented **Firebase Authentication, Firestore, and Cloud Messaging** for real-time app functionality, with **JWT**-based authentication and **MongoDB** for data storage.
- Shipped the application to the Google Play Store and collaborated with cross-functional teams on feature design and delivery.

Full Stack Developer & Online Instructor — Jan 2024 – Jul 2025

Torbita Computer Training School — Abuja

- Delivered hands-on instruction in **React.js, React Native, Node.js, and MongoDB** to secondary school students and adult learners, in person and online.
- Built React Native mobile applications used as part of the training curriculum to reinforce practical, project-based learning.
- Authored instructor guides and structured training curricula to support consistent, project-based delivery across cohorts.

EDUCATION

Kwara State Polytechnic

- Higher National Diploma, Computer Science (Oct 2020 – Aug 2022)
- National Diploma, Computer Science (Aug 2017 – Sep 2019)
- NYSC: Completed
